

## Assignment – 1

### Vibe coding to Integrate Jira stories

After connecting to Jira, have drop downs to select different projects and then to select stories/tasks from that.

**Connected to Jira**

Select Task

US-12 - Nurse Dashboard View Request

Upon selecting tasks, auto populated the details in the form with some additional info

The screenshot displays the Jira Performance tab. At the top, a waterfall chart shows the duration of various steps in milliseconds. The x-axis ranges from 0 to 70,000 ms. The chart includes a blue bar for 'Request' (approx. 10,000 ms), a green bar for 'Response' (approx. 10,000 ms), and a red bar for 'Total' (approx. 20,000 ms). Below the chart, the 'Name' column lists 'projects' and 'issues-by-project'. The 'Request Payload' section is expanded, showing a JSON object with the following details:

Story Title \*

HC-310 — Doctor Prescription Verification Workflow

Description

The system should enable doctors to view medication details prescribed by other physicians or generated automatically from patient diagnosis. It should allow verification of dosage, potential interactions, and duplicate drugs. Once verified, prescriptions should automatically sync with the pharmacy module for patient dispensing.

Acceptance Criteria \*

The system should enable doctors to view medication details prescribed by other physicians or generated automatically from patient diagnosis. It should allow verification of dosage, potential interactions, and duplicate drugs. Once verified, prescriptions should automatically sync with the pharmacy module for patient dispensing.

Test Case ID

Title

Category

Expected Result

TC-001

Doctor verifies prescription from another physician successfully

Positive

Prescription is marked as verified and automatically syncs with the pharmacy module; pharmacy receives the prescription within 2 seconds

TC-002

Doctor verifies auto-generated prescription from diagnosis

Positive

Auto-generated prescription is verified and sent to the pharmacy module without errors

TC-003

Verification fails when dosage exceeds safe limit

Negative

System displays an error message indicating unsafe dosage and prevents verification; prescription is not synced to pharmacy

TC-004

Verification blocked due to drug interaction warning

Negative

System shows a drug-interaction warning and disables the verify action until the conflict is resolved

TC-005

Verification prevented when duplicate drug entries exist

Negative

System flags duplicate drug entries, displays a message, and does not allow verification

TC-006

System prompts for missing dosage information (edge case)

Edge

System prompts the doctor to enter a valid dosage before allowing verification

TC-007

System handles prescription with large number of medications

Edge

All medication details load without performance degradation; verification succeeds and syncs to pharmacy

Feature: Doctor Prescription Verification Workflow

Scenario: Doctor views pending prescriptions for verification

Given a doctor with access to a patient record

When the doctor opens the prescription module

Then all pending prescriptions should be displayed for verification

Scenario: Doctor reviews a prescription with a dosage conflict

Given a doctor with access to a patient record

And a pending prescription containing a dosage conflict

When the doctor reviews the prescription

Then the system should highlight the dosage conflict issue

And the system should provide AI-based recommendations for correction

Scenario: Doctor reviews a prescription with a duplicate medicine

Given a doctor with access to a patient record

And a pending prescription containing a duplicate medicine

When the doctor reviews the prescription

Then the system should highlight the duplicate medicine issue

And the system should provide AI-based recommendations for correction

Scenario: Doctor approves a verified prescription and updates pharmacy queue

Given a doctor with access to a patient record

And a verified prescription
